“Typical” Engineering Qualities

- ORGANIZED – Methodical, sequential thinkers.
- INQUISITIVE - The art of sincere *inquisitiveness* is a priceless characteristic of the progressive leader.
- APOLITICAL - Uncommon objectivity and a chance to leverage their keen self-awareness, enabling unselfish, practical decisions.
- PRAGMATIC – They value the true utility of an asset, process or investment over optics which, odd as it may sound, promotes common sense.
- RESOURCEFUL - Detail-oriented, resourceful problem solver who applies logic and empirical evidence to derive practical, fact-based solutions to unplanned challenges.
- NICE - Engineers are not *usually* psychopathic narcissists, completely void of human emotion.

So, Why *Not* Engineers?

Things Working Against the Aspiring STEM Leader

Biases
Low visibility
Low self-promotion
They are valuable as is
Lack of business acumen

The Pros and Cons of Moving into Leadership

PROS

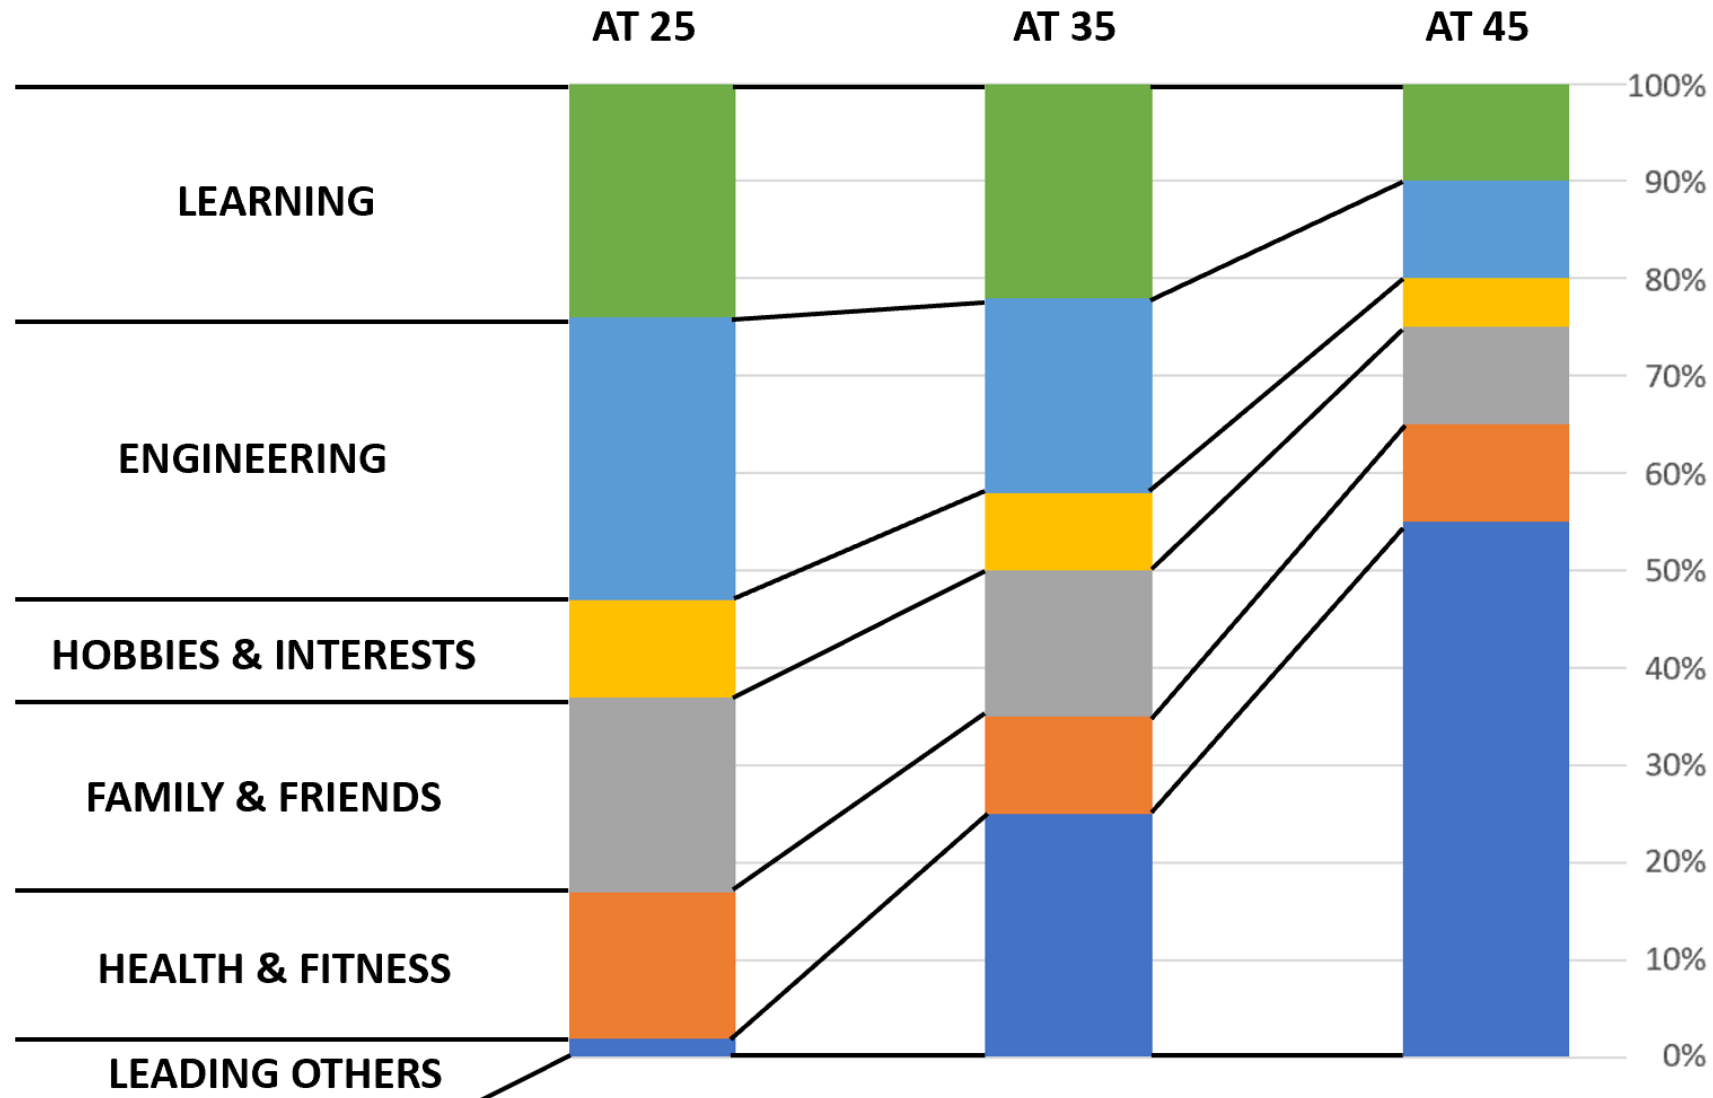

- You get to watch others advance in life and business because of your involvement.
- Your compensation grows at a rate equal to the square of your age.
- You have the opportunity to make a significant impact on the direction and success of the organization.
- Fewer people check your math and second guess your decisions.
- You will be exposed to experiences that will propel your skills and understanding far beyond that of an individual contributor.

CONS

- There will be illogical decisions, behaviors and outcomes around you due mostly to the politics of management.
- The higher in the food chain you are, the harder it becomes to find a new job if you need one.
- Errors in judgement and goof ups can have far-reaching and long-lasting consequences.
- The list of people that don't like you will be longer than you are used to.
- If you can't manage stress, it will eat you like a can of Pringles.

SPOILER ALERT:

You are quite likely to miss your bowling league on Tuesdays.

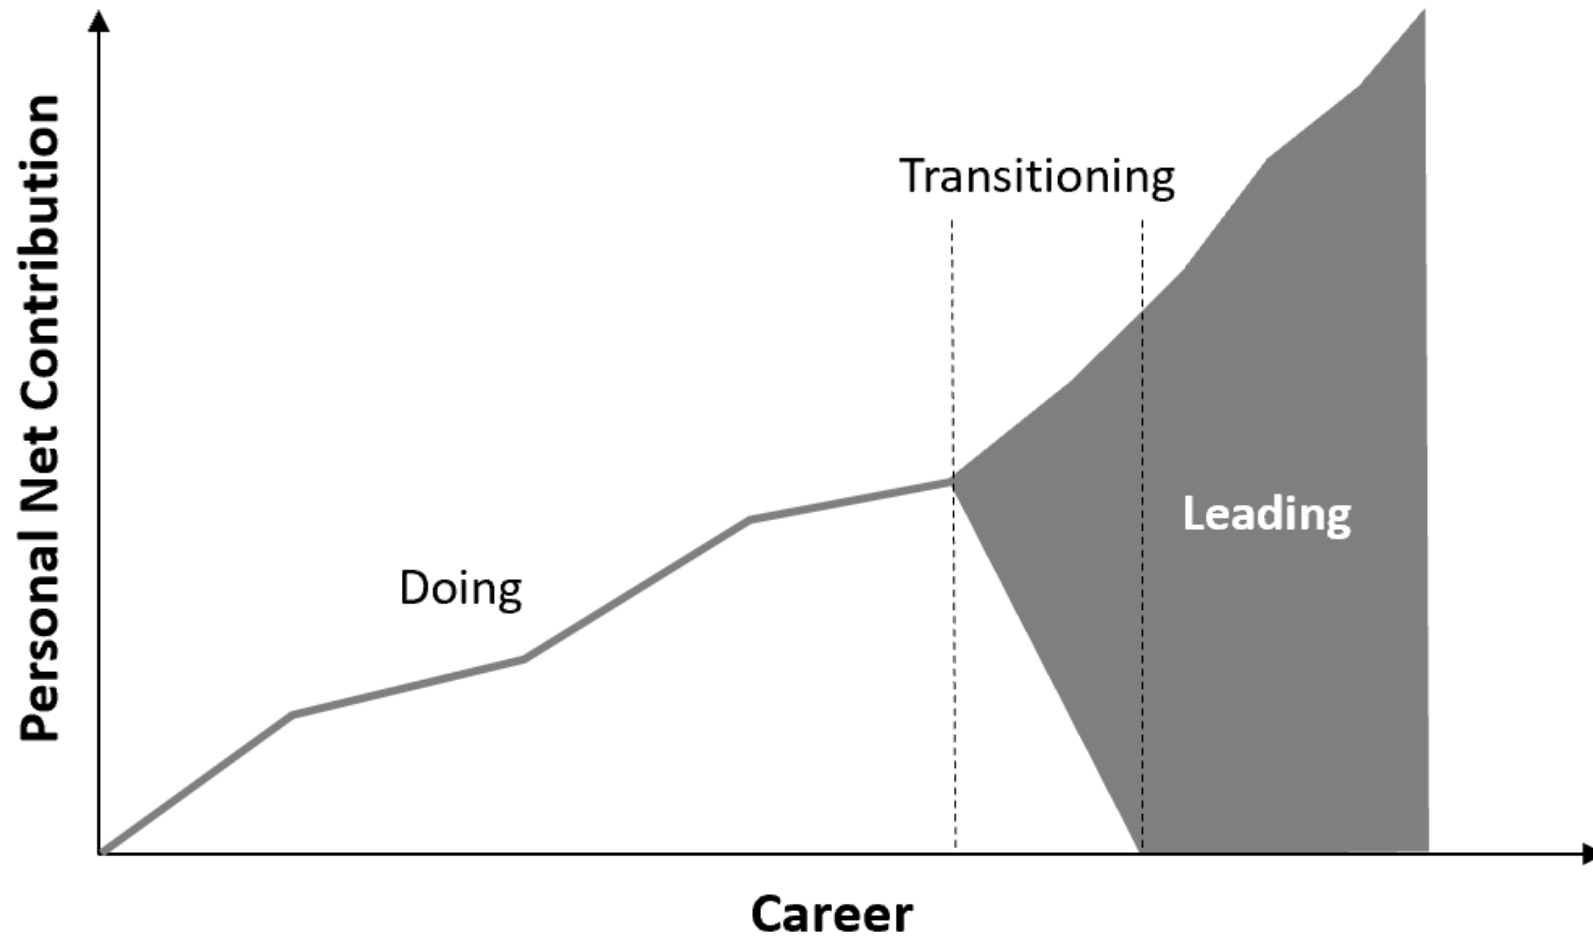

Contributing vs. Leading

THE JOB AT HAND

Budget & Schedule

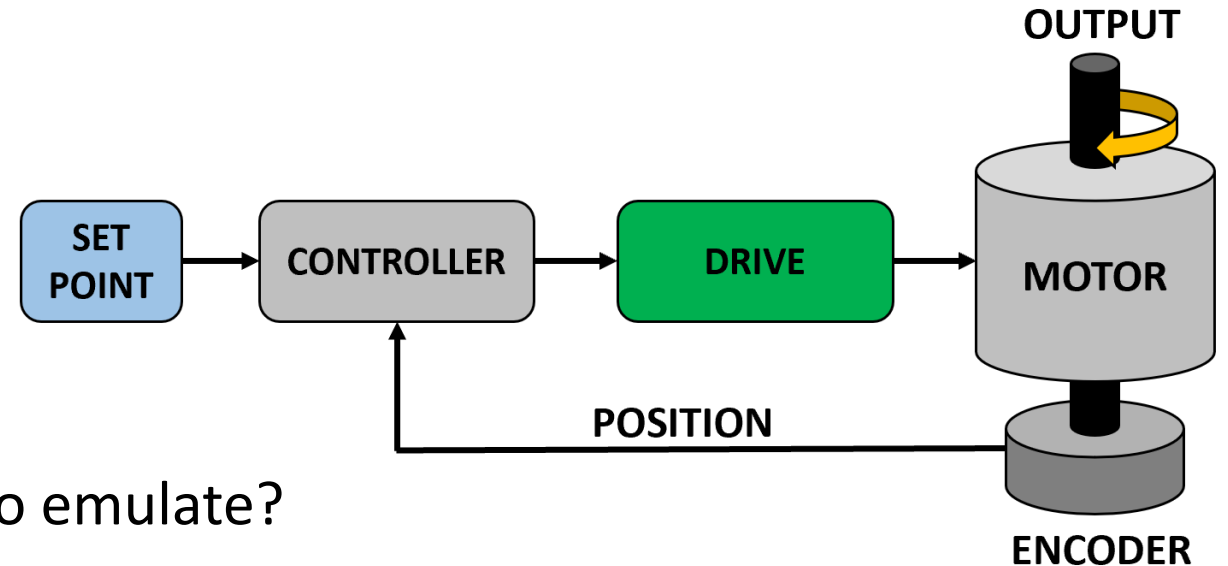

Your Contribution Is No Longer the Line of Your Progress ...it is the integral of your progress.

Crafting Your Own Leadership Persona

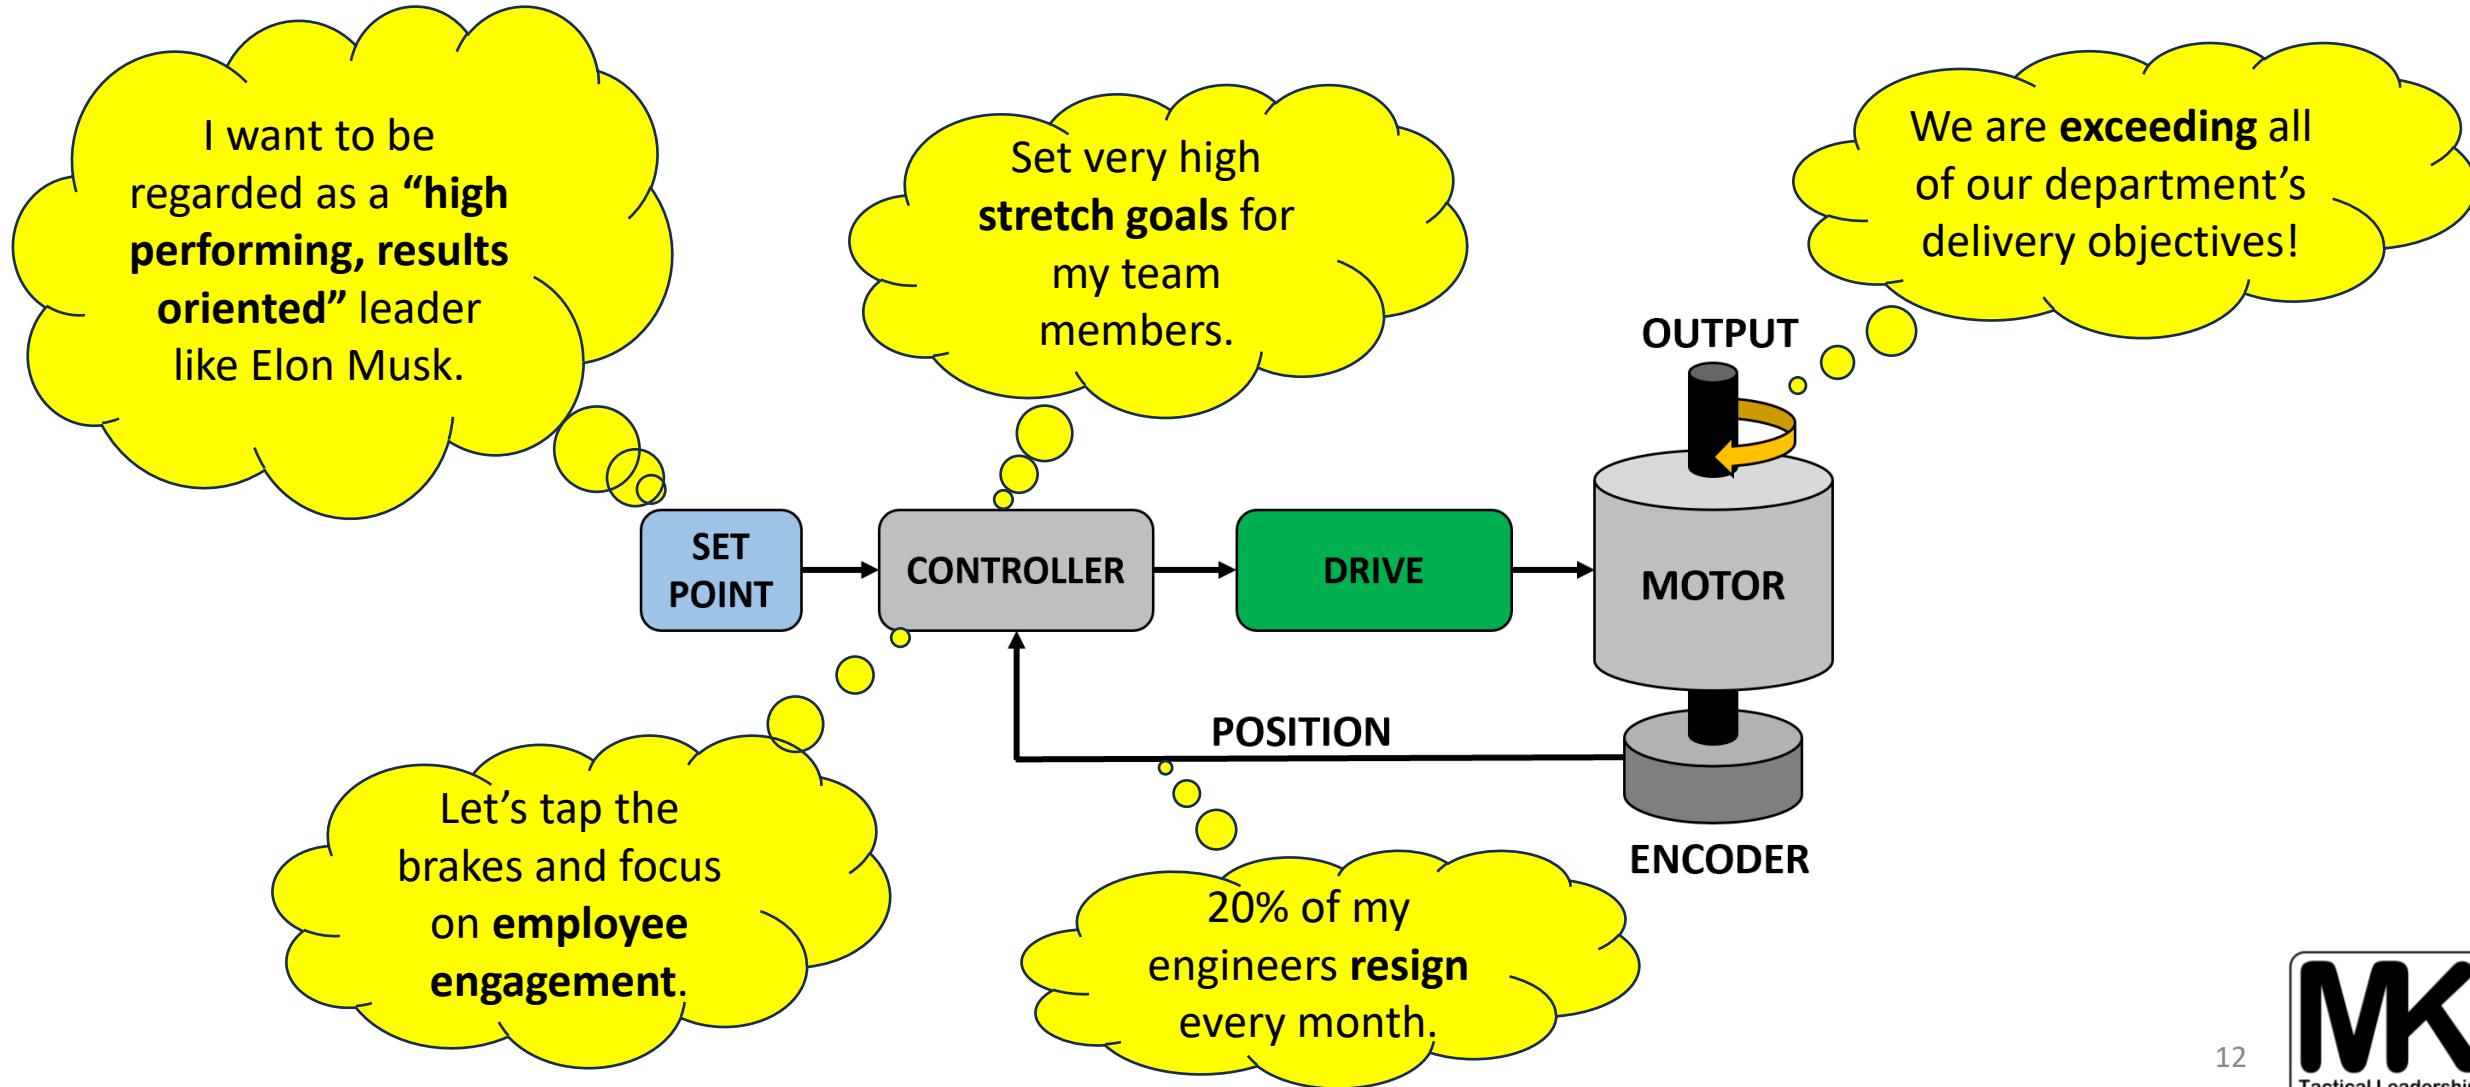

Build a closed-loop control system and adjust over time

- Establish Set Points
 - What qualities and people do I want to emulate?
- Use a Precision Encoder
 - How will I measure success in my actions?
- Adjust Controller Parameters Over Time
 - Monitor performance feedback and adjust parameters as needed...

Crafting Your Own Leadership Persona

This is a continuous process, not an event...

Four Paths from STEM to Leadership

- You were born to lead

- You thunk your way there

- You are a victim of your own success

- You were qualified and groomed

So, How to Ignite this Transition?

- Ask yourself, “Do I find great joy in humbly helping others succeed?”
- Get comfortable raising your hand when opportunity knocks
...and even when it doesn't.
- Share your aspirations.
- Take inventory, then close the gaps in your knowledge and skills base.
- Seek a mentor or 2, and be OK when proven leaders advise you.

Strategic or Tactical? Yes.

It's not a choice, it's a continuum.

Exit strategy

Enhance valuation

Acquire competitors

Define synergies

Integrate acquiree

Rationalize best practices

Optimize new team

Improve value

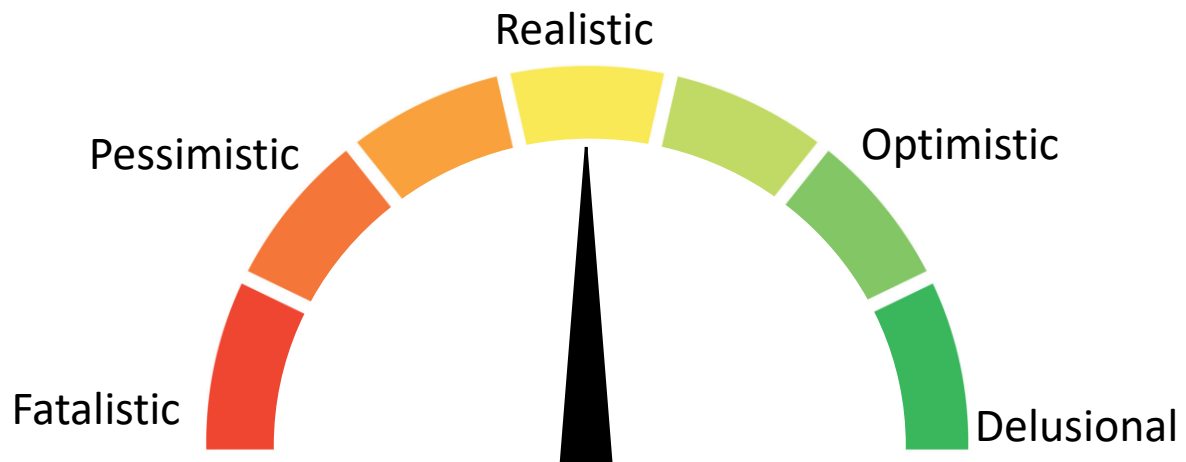

Sell company at enhanced value

Leadership Characteristics at the Ends

	STRATEGIST	←————→	TACTICIAN
Reach	Broad		Focused
Enjoy	Visualizing		Seeing
Thinking	Abstract		Tangible
Data	General		Detailed
Results	Long Term		Immediate

Strength = Attitude + Behavior

ATTITUDE

BEHAVIOR

Strength = Attitude + Behavior

ATTITUDE

Leaders?

BEHAVIOR

Why Optimism?

- When faced with the unknown, there is no reason to not be optimistic.
- Attitude is contagious and cats and employees can sense fear. Those watching your every twitch will relax their shoulder muscles when they see you as a positive and confident force.
- You may be churning on the inside but let's not keep others up at night worrying about it.
 - It's healthy to churn on occasion.
- Is the issue at hand...
 - Personal? (My dog died)
 - Personal-professional? (I hate my boss)
 - ★ Professional? (Our best patent is expiring)

A LOW-PASS FILTER

However...

Managing your Optimism in Negative Times

- When a professional situation is becoming dire and could affect the organization, the adults working with you need to know about it immediately.
- There is a correlation between one's level in the company and their ability to process concerning information.
- You are mortal and will be completely flummoxed now and then. Establish and rely upon a network of peers and leaders to be *your* backbone in those times.
- If you save hysteria for *true* emergencies, it will provide the impact necessary at that moment.

Establishing Consensus

Facts

- The objective is to harvest the value of the entire team and develop the *optimum direction forward*.
- Rank has its privilege...get used to that.
- This is exactly why they call it a “Management Team.”

The Process

...be it formal or informal...

1. Prepare your perspective and pitch it.
 - a. Bring data – if you don't have data...
 - b. Be objective in your conviction – bring pros and cons
 - c. Love, but don't be *in love* with your view
2. Respectfully caucus.
 - a. Seek to find overlap in the varying perspectives
 - b. Don't let it become personal
3. Once the direction is set, trust the process and “Salute the flag.”
 - a. Relegate your original view to cloud storage and move on
4. Communicate down the “optimum” direction and inspire action.

Dictionary

Definitions from [Oxford Languages](#) · [Learn more](#)

in·teg·ri·ty

/in'tegrədē/

noun

1. the quality of being honest and having strong moral principles; moral uprightness.
"he is known to be a man of integrity"

Similar:

honesty

uprightness

probity

rectitude

honor

honorableness

Leading with Integrity

A Few Guidelines and Warnings

- “One’s integrity is defined at its lowest measured point, and that’s how people will remember you.”
Mike Duke, former CEO of Walmart
- Being regarded by others as a person of principle will greatly improve your effectiveness as a leader and foster the loyalty needed to make a difference.
- You set the bar: If you wear your underwear on the outside of your jeans, everyone will think it’s alright to wear their underwear on the outside of their jeans.
- “Goodness” in leadership *may* help a company reach its business potential.
Conscious Capitalism: Liberating the Heroic Spirit of Business, 2012
John Mackey (co-founder of Whole Foods) and Raj Sisodia
- Be aware, doing the “rightest” thing may be neither the best thing for the company nor your career.
- That said, It feels good and you will never look back with regret.

OK, one more thing...

BECOMING AN ENGINEERING LEADER

Date: Wed-Thu, May 15-16, 2024

Delivery Method: In-person With Livestream

Time: 9am-4pm CT

Location: [UWM School of Continuing Education](#) or view on Zoom

Instructor: [Mike Kotecki](#)

CEUs: 1.2, **PDHs:** 12

Enrollment Limit: 35

Program Number: 4860-16086

Registration Deadline: May 8, 2024
